DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 23, 2009 has been entered.
2. Claims **1-11, 13, 15, 16, 23, 36-45, and 47-49** are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **1, 13, 15, 16, and 23** are allowed over the prior arts cited records.

The closest prior arts are:

1) Sawyer (US 5,828,737) discloses a bandwidth-on-demand type cellular telephone system wherein subscribers are charged for use of the system based in part on the total amount of bandwidth used to carry the subscriber communication. The measurements of the maximum amount of bandwidth used during predetermined time intervals are made during the course of each communication, with the maximum bandwidth measurements being summed to determine an *estimate* of the total amount of bandwidth used during the communication. The charge for the communication is then determined by multiplying the *estimated* total bandwidth measurement by a charging rate multiplier. The periodic instantaneous bandwidth use measurements are made during the course of each communication. The periodically made bandwidth use

measurements are summed to determine an *estimate* of the total amount of bandwidth used to carry the communication. A charging rate multiplier is then applied to the determined total bandwidth to obtain the charge incurred for the communication. Thus, Sawyer discloses *estimating* the total amount of bandwidth used during each communication by summing the results of periodic instantaneous bandwidth use measurements. As such, the network flow data in Sawyer does not include a number and type of packets for a flow, wherein the network flow data also includes a protocol type, a source and destination Internet protocol (IP) address, a next hop address, and a first and last timestamp of packets in the flow.

2) Saari (US 6,338,046) discloses a system and method for determining charges for use of network service connections. The network includes nodes which facilitate the transfer of information between source and destination locations. When a connection is established with a node, a billing cell is transmitted to the node over the connection which contains billing and connection information. Data cells are transmitted over the same connection subsequent to the billing cell. A terminate billing cell or conventional means may be used to drop the connection when the connection is no longer needed. The node computes the cost of using the connection based on the billing and connection information copied from the billing cell, and may also consider the connection time and the amount of data transferred over the connection. Upon establishing a subsequent connection with another node, the previous node transmits the billing cell to the new node which copies the billing cell content and, after receiving the data cells over the new connection, performs similar connection usage

computations. This process is repeated by each of the nodes involved in the transfer of information between the source and destination. The nodes transmit their respective charging information to a network billing system which generates a final bill that is forwarded to the user. The billing cell may be transmitted from the destination back to the source to verify proper operation of the billing procedure. Fixed rate and variable rate billing schemes may be implemented and augmented as needed by each network operator. Thus, the data cell in Saari does not include a number and type of packets for a flow, wherein the network flow data also includes a protocol type, a source and destination Internet protocol (IP) address, a next hop address, and a first and last timestamp of packets in the flow.

Therefore, it is clear from the description of Sawyer and Saari, that the prior arts do not considered the possibility of: said network flow data including a number and type of packets for a flow, wherein the network flow data also includes a protocol type, a source and destination Internet protocol (IP) address, a next hop address, and a first and last timestamp of packets in the flow, as included in claims 1, 13, 15, 16, and 23.

4. Claims (2-11), (36-45) and (47-49) are allowed because they are dependent claims of the allowable independent claims 1, 15, and 16 above, in that order.

Conclusion

5. Claims **1-11, 13, 15, 16, 23, 36-45, and 47-49** are allowed.
